

Hansel gethansel.io

Hansel is a complete solution that provides AR navigation for users at a physical venue. It contains a mobile SDK, a Venue Management System (VMS) and a dashboard with analytics.

With Hansel AR navigation, you create a natural experience for users to find their way around your venue, following digital paths through a real environment. The only device required is a smartphone.

As Venue Administrator, you get access to your own Venue Management System, where you can set up Points of Interest and have full control of how your Augmented World operates.
